CEDRIC THOMAS Y. RAFANAN

cedricrafanan27@gmail.com • cedraf.vercel.app • github.com/CedRaf • linkedin.com/in/cedric-rafanan

SUMMARY

CS graduate (Cum Laude, USC) with a software developer internship and freelance experience building React and TypeScript web apps, from real-time WebSocket interfaces to PostgreSQL/MySQL schema design with C# and Node.js backends.

EDUCATION

University of San Carlos | Talamban, Cebu | July 2026
Bachelor of Science in Computer Science
GPA: 1.55 / 1.0 Highest (Cum Laude), Dean's List 2022-2026
Relevant Coursework: Data Structures, Algorithms, Software Engineering, Web & App Development

PROFESSIONAL EXPERIENCE

Freelance Software Developer (August 2026 – Present)
Real-Time Scoreboard System (Pickleball Court)

- Built the WebSocket layer and core React (TypeScript) frontend for a team-built scoreboard, syncing TV displays across 2 courts from remote devices with under 100ms latency.

Order Management System (Rice Wholesaler)

- Building the order and sales module of a warehouse management system for a wholesaler processing 100+ order slips daily (React, TypeScript, PostgreSQL, Drizzle ORM).
- Designed the module's schemas and backend, syncing stock deductions to inventory and generating daily, per-cashier sales summaries.

Alliance Software Incorporated (September 2025 – March 2026)
Software Developer Intern

- Took over an unfinished exit clearance system (React, TypeScript, C#) and brought it to company-wide rollout, replacing paper-based offboarding.
- Fixed broken JWT authentication, API endpoints, and role-based access to restrict sensitive offboarding data to authorized roles.
- Presented the system to stakeholders and refined features with QA and ~15 employee testers.

PROJECTS

JobTracker (October 2026) Live Demo | GitHub
Python, TypeScript, React, Supabase (PostgreSQL), GitHub Actions, Vercel

- Built a Python scraping pipeline on GitHub Actions that pulls listings from multiple job boards twice daily; it scanned 1,700+ listings in five days and auto-filtered ~80% with a weighted rules engine,
- Designed a Supabase PostgreSQL backend with RLS and audit tables, so a static React app reads and writes securely without a custom server. Migrated 500+ records from a Google Sheets prototype using dual writes.
- Built a React + TypeScript dashboard with a drag-and-drop kanban, funnel analytics, and plain-word filter rules compiled to regex with one-click rollback. The project has 237 tests in CI (pytest, Vitest).

Retrieval Augmented Generation Framework (June 2025 – November 2025) IEEE Xplore | GitHub
Python, Milvus, Neo4j, LangChain

- Developed a hybrid RAG framework for financial question answering over 200 SEC filings, routing queries (97.5% routing accuracy) between dense/sparse vector retrieval in Milvus and a Neo4j knowledge graph built from structured financial statements.
- Graph-based retrieval raised answer correctness from 53% to 68% and context recall from 49% to 66% over a flattened JSON baseline, and the full pipeline outperformed a closed-book LLM on every evaluated metric across 17,000 QA pairs.

SKILLS

Languages: TypeScript, JavaScript, C#, Python, SQL, C
Frameworks & Libraries: React, React Native, Node.js, Express, .NET, Prisma, Drizzle
Databases: MySQL, PostgreSQL, Milvus, Neo4j, Supabase
Tools: Git/GitHub, GitHub Actions, Azure DevOps, Postman, Vercel, Claude Code, Copilot

CERTIFICATIONS & ACTIVITIES

PHILNITS FE Certification (October 2024) • TESDA Programming (JAVA) NC II Certification (January 2024) • Cisco CCNAv7 Certification (December 2023) • Cisco Cyber Security Essentials Certification (November 2024) • ACDSA 2026 Conference – Thesis Presentation (February 2026)
